Re: Calliham Mine M/037/023
San Juan County, Utah

Dear Holland:

In reply to your letter of September 17, concerning the Calliham vent hole, the following information is given as per your request.

1. The vent hole will be 640-feet in depth.
2. A drill hole was drilled on the site and encountered no water. Thus there will be no impact on the groundwater.
3. After completion of mining, the pad will be removed and the area will be reclaimed to the present existing contours. The area will be reseeded. The reclamation of the vent hole will consist of waste placed in the vent hole to within seven feet of the surface. A five-foot cement plug will be placed at the top of the waste with two-feet of topsoil to the vent hole collar.
